

# Latest technology ensures precision

HANNO Venter is the principal and sole dentist at Orange Moose Dental, taking care of all of his patients' dental care needs from start to finish.

Each time you visit Orange Moose Dental, you can be assured you will be seeing Dr Venter, be it for your preventative care appointment, emergency appointment or pre-defined appointments.

Dr Venter makes use of only digital radiography due to the proven dramatically lower levels of radiation absorbed by the body compared to earlier more traditional film systems.

Orange Moose makes use of sensors rather than films in order to also immediately display teeth and gums on their computer screen because staff understand your time is valuable too.

For more accurate records and progress of treatments they also make use of specialist level digital photography. The addition of a 3D cone beam CT and OPG technology insures lower

levels of radiation to patients and more effective treatment planning in dental implant cases and wisdom

Three-dimensional cone beam images to view patients' bone and teeth in high definition.

tooth surgery. Patients now don't have to be referred to a radiologist in town to obtain images in deciding whether or not you might be a suitable candidate for dental implants.

Orange Moose will now be able to more easily detect the need for pre-prosthetic surgery or bone transplants before any cosmetic dental procedures or dental implants are done.

BEST PRACTICE: Orange Moose Dental's cone beam x-ray unit.
